## Venture increases landholding adjacent to the Lake Maitland Uranium Deposit

The Board of Venture Minerals Limited (ASX code: VMS) is pleased to announce that the Company has added highly prospective tenure to the Maitland Channel Project. Venture now has over 146 square kilometre of tenure adjacent to the Redport's Lake Maitland Uranium deposit (10,747 tonnes of  $U_3O_8$ ).

Following completion of the new application, Venture now controls 18 kilometres of the same Tertiary channel system that hosts the Lake Maitland resource. Drilling completed in the 1970s between the Lake Maitland Deposit and Venture's tenure intersected carnotite, the main uranium-bearing mineral in these calcrete deposits.

The Company now plans to conduct ground investigations to determine the source of the Uranium rich radiometric anomalies and to generate drill targets for immediate testing following the granting of tenure.

Venture Minerals is working towards further strengthening its portfolio of Uranium assets both within Australia and internationally.

Kind regards
